

Creation of Beauty

Cuixiang Zhong

Jiangxi Normal University, Nanchang 330022, China

ABSTRACT

Human beings have never stopped pursuing and worshiping beauty, but so far they have not found the secret to produce beautiful offspring. Some beautiful couples may not have beautiful children, but some ordinary looking couples can have beautiful children. These common problems in life make many parents puzzled. Therefore, according to the growth and development process of his daughter, the author found the general law of giving birth to beauty, that is, to make a couple have beautiful children, the woman's body should not be much smaller than the man's, or the woman should be plump or fat enough to have enough skin and meat to package the man's skeleton; If the man's back is straight, the child also has a straight body. If people follow this rule, they can greatly increase the proportion of beauties and make the world much more beautiful.

Key words: creation, beauty, fertility, law

INTRODUCTION

Since God created Adam and Eve, human beings have not stopped the pursuit of beauty.

As a result, Adam and Eve ate the forbidden fruit by mistake and were expelled from the garden of Eden. With the progress of human society, people's pursuit and worship of beauty is more and more intense, but so far no secret has been found to produce beautiful offspring. The myth "Adam and Eve" is from ancient Greece, the story tells people that God uses the dust on the ground to shape a man Adam, and then takes out a rib from him to create a woman Eve ^[1]. This theory of creating human obviously goes against the scientific principle of human genetics, because human genetics depends on human male gene and female gene, not on inanimate dust, nor on pure male gene to create a woman. It can be seen that the ancient Greeks' understanding of human genetics is still very vague. Looking at the situation in the East, Huainanzi records the ancient human cognition of childbearing: in the polygamous matriarchal society, the birth of a child is considered to be decided by more than one man, someone decide its gender, someone decide its arm, someone decide its ears, eyes and other features ^[2]. This view seems almost absurd now, indicating that the ancient oriental people's understanding of human genetics is also very vague. In fact, in modern society, heredity is still a very complex problem, and many of its laws are elusive. We often see this phenomenon in our life. Some beautiful couples may not give birth to beautiful children, but some ordinary looking couples can give birth to beautiful children. Why? This is a problem that many parents do not understand ^[3] ^[4].

EXPLORATION OF THE MYSTERY OF BEAUTY

Nothing is difficult if you put your heart into it. The author's exploration of the mystery of beauty illustrates this point. From September 1979 to July 1982, the author studied

physiological science and Biological Science in Chongyi middle school, one of the key middle schools in Jiangxi Province. In addition, the score of biology in the college entrance examination reached 90, which was the highest score of biology course of Chongyi middle school in that year. After being admitted to Peking University, the author often reads books on Biology in his spare time, which lays a solid foundation for the research of life science.

My daughter was born in 2001, which can also be called Miss millennium. When the doctor took me to the delivery room to visit her, I saw that she was wrapped in a soft swaddling bag, revealing a cute little head, but she was still asleep and her skin was wrinkled. Seeing that I was a little surprised, the doctor said that the baby's physical condition was very normal. Although we could not see whether she was like her mother or her father, she had a delicate straight nose and a clear tip, showing her extraordinary temperament. In addition, although her waist is not thick, she has a broad stomach, which indicates that she will have a strong physique and the spirit of hard work [5]. It's true that the appearance of the newborn is not clear, but I know that the growth and development of the child is determined by the parents' genetic genes. For example, my daughter's straight nose is derived from her father's genes, while her clear nose tip is derived from her mother's abundant skin, that is, from her mother's genes. Another example is that my daughter's waist is inherited from her father's side, while her wide stomach is inherited from her mother's side. It can be seen that children inherit bones from their father and skin from their mother.

However, as the saying goes, "A girl changes eighteen times between childhood and womanhood". At the beginning, the bones of the newborn, such as the frontal bone, nasal bone, zygomatic bone and mandible, have not yet developed. Therefore, the face of the newborn is small, and it is difficult to confirm its final face shape. But with the growth of age, especially the growth and development of childhood and adolescence, the skull will gradually grow, and the facial features will be basically shaped in adulthood. Because the growth of the child's bone inherits the factor of the father and the growth of the skin inherits the factor of the mother, the growth of the skin may not be able to keep up with the growth of the bone in the process of the child's growth. When the mother is short and thin and the father is tall and strong, the growth and development of their children's skin often can't keep up with the growth and development of their bones. Without enough skin to wrap the bones, the children will not look good or even have deformities. On the contrary, when the height of the mother is not too much lower than that of the father and the mother is plump or obese, the growth and development of the skin and flesh of their children can keep up with the growth and development of the bones. When there is enough skin and flesh to wrap the bones, the children will grow more and more beautiful. My daughter named Yurong is in the second situation. Fig. 1 is a picture of my daughter when she was 9 years old. It can be seen that she has a pair of long and big eyes, a delicate and tall nose, neat teeth, a pair of elegant lips, and a pair of ears close to her brain. It can be said that her facial features are coordinated and her face is correct. Fig. 2 is a picture of my daughter when she was admitted to Northwest University, China at the age of 19. It can be seen that her facial features are basically open, the sky is full, and she is in a young and beautiful period.

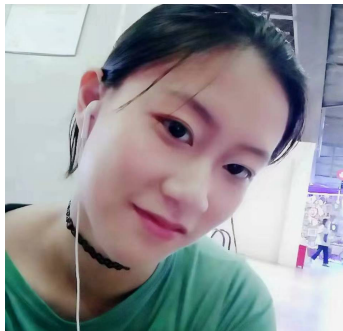

Fig.2 A photo of Yurong at the age of 19

Example verification

In order to ensure that the above inference is correct, the author finds some typical examples to verify, as shown in the table below.

character image	beauty of children
	The famous actor Pan Changjiang is 160cm tall, his wife Yang Yun is 165cm tall and his daughter Pan Yang is 162cm tall. Because Yang Yun is taller than her husband, and she is also plump, her daughter is also beautiful .
	Because Huang Shengyi's parents are about the same height and her mother is plump, Huang Shengyi is very beautiful.

	Because the parents of the foreign family are very tall and of the same height, and have a correct face and figure, the children are very beautiful
	Li Yapeng is 183cm tall and weighs 75kg, while Faye Wong is 174cm tall and weighs only 50kg, looks thin, so their daughter Li Yan has a congenital impression^[6]. It can be seen that high-value parents may not have beautiful children.

CONCLUSION

God could make people, and Yuan Longping could grow hybrid rice, but no one has found the general law of bearing beauty. Therefore, according to the growth and development process of her daughter, the author explores the general law of giving birth to beauty, that is, in order to make a couple give birth to beautiful children, it is required that the woman's stature should not be too much smaller than the man's stature, and the woman is plump or obese, so that there is enough skin and meat to pack the man's bones ; in addition, if the man has a straight back, the child born will also have a straight back. Because the author first discovered the general law of giving birth to beauty from the growth and development of his daughter, so that people can follow this law to give birth to beautiful children and greatly increase the proportion of beauty, his daughter can be called a little angel once in a millennium.
